

Medical Skin Needling

Now available at Raptcha'u

Why would you want to have skin needling:

For the treatment of fine lines, lax skin, stretch marks, acne scars & burn scars, hyperpigmentation and broken capillaries.

Skin needling induces skin tightening and thickening of the dermis. Remember as we age the dermis which is the skins supporting and nourishing layer thins out and the skin loses much of its elasticity or ability to bounce back. It is the ideal skin rejuvenation in that it never destroys the epidermis, it stimulates new collagen formation and promotes normal light reflectance in the skin (skin colour). It also stimulates the matrix with increased water retention in the dermis which means less wrinkled skin. Other advantages of skin needling is

- Healing period is minimal (redness +/- half a day)
- Procedure is cost effective
- Process is suited to all skin types (including laser resurfaced skin)
- No scarring is induced
- No additional sun sensitivity is induced
- All areas of the face, neck and body can be treated
- Procedure is cost effective

This treatment is now available at Raptcha'u with Carolyn Della Zoppa who is a qualified Dermal Therapist. It is the latest craze and has been seen regularly on 10 years younger in 10 days. The skin is always prepared with a topical Vitamin A for a minimum of 3 weeks but preferably 3 months to maximize DNA activity & ensure accelerated dermal matrix fibroplasias & cellular regeneration.
